Professional Summary

DevOps and Software Engineer with around 4 years building and operating CI/CD pipelines, AWS cloud infrastructure, and full-stack applications. Hands-on with Docker, Kubernetes, Jenkins, Terraform, and Ansible to deliver reliable, repeatable deployments — including cutting environment setup time by 80% through Terraform automation. Strong Python and PHP background across the LAMP stack, bridging development and operations to ship features and infrastructure changes with equal fluency.

Technical Skills

Cloud : AWS (EC2, S3, RDS, VPC, Lambda, API Gateway, CloudFront, SQS, CloudWatch)

CI/CD & IaC : Jenkins, Terraform, Ansible, Azure DevOps Repos

Containers & Orchestration : Docker, Kubernetes

Monitoring & Observability: Prometheus, Grafana

Version Control & Quality: Git, GitHub, SonarQube

Languages: Python, PHP

Web/App: React.js, MySQL, Postman

OS: Linux

Work Experience

TriByte Technologies Private Limited – Bangalore, India

Sep 2022 - Present

Software Developer - DevOps & Web Development

- Built and managed CI/CD pipelines using **Jenkins**, integrated with **Azure Repos** for version control and **SonarQube** for automated code quality gating, reducing failed deployments and improving release reliability.
- Operated **AWS cloud** environments (Staging, UAT, Production) using **EC2, S3, RDS, VPC, ECS, Lambda, SQS, CloudFront** and **CloudWatch**, maintaining secure and highly available infrastructure across environments.
- Automated deployments for monolithic applications in staging using **Jenkins, Ansible**, and **Python** scripting, reducing manual release effort.
- Deployed and managed microservices in UAT using **Docker** and **Kubernetes** on AWS, handling cluster management, scaling, and service discovery.
- Monitored production systems using **Prometheus** and **Grafana**, handled incidents, and optimized performance to maintain high availability and system reliability.
- Provisioned infrastructure for new client environments using **Terraform**, ensuring repeatable and consistent deployments, reducing setup time by 80%.
- Implemented high-efficiency query validation and correction logic, improving system accuracy by 90%.
- Participated in the end-to-end migration of a monolithic application to a microservices architecture, containerizing services with Docker and deploying them on Kubernetes to improve scalability and deployment independence.
- Migrated legacy application codebase to the updated microservices version, coordinating with the development workflow to ensure continuity of functionality and minimal disruption during cutover.
- Built and maintained backend services and web-application infrastructure using **PHP, Python**, and **MySQL** on **Apache**, supporting reliable, version-controlled releases alongside infrastructure work.
- Built and enhanced application features using **Node.js** and **React.js**, leveraging AI-assisted development workflows to accelerate iteration, improve code quality, and reduce delivery time.
